

3150 Project Report

John Lombardo

Features:

- Text Wrap
- Command mode
- Undo + Redo (press ctrl+z or ctrl+y while in command mode)
- Keyword highlighting (use keywords.txt)
- Can load long file (Only one page though)

Things to note:

- Some of the logic for text wrapping causes the cursor to be desynched on certain rows. All inputs occur at the right place despite the visual position of the cursor being slightly off.
- The included makefile creates an executable file called editor.
- The included keywords.txt file has words **CSE, 3150, CSE3150, project**
- Keywords must be followed by a space to highlight.
- If you type in a filename like ./editor [filename.txt] the program will create the file if it does not exist, if the file exists it will load it in the view as expected.
